

What You Need to Know Before Ordering

Regarding Updates for the DWA1000 there are two options, if the Netbook being used with the machine is 5 years or older in age, we strongly advise replacing the netbook for a new one with the program and specs updated already. Shelf life of the netbooks vary and attempting to update an older netbook may result in laptop crashes if it cannot handle the update due to age, low memory space, etc and is **not refundable**. Also taking into account the lifespan of electronics.

If the Netbook is within 4 years or newer it is recommended to simply use the same netbook and upload the new specs.

The part numbers needed to order either are the following:

New Netbook with program/spec loaded: NETBOOK KIT, You will need the serial number of your machine to place the order

Using the original netbook and opting for update: 86SC84707, we will need the model number of the aligner, serial number, and **machine code** (found inside the alignment program) to process spec update orders.
