

# **SERVICE BULLETIN: NEW EVFPK**

## **EFFECTIVE: 4/7/25**

### **To: Distributors and Certified Installers**

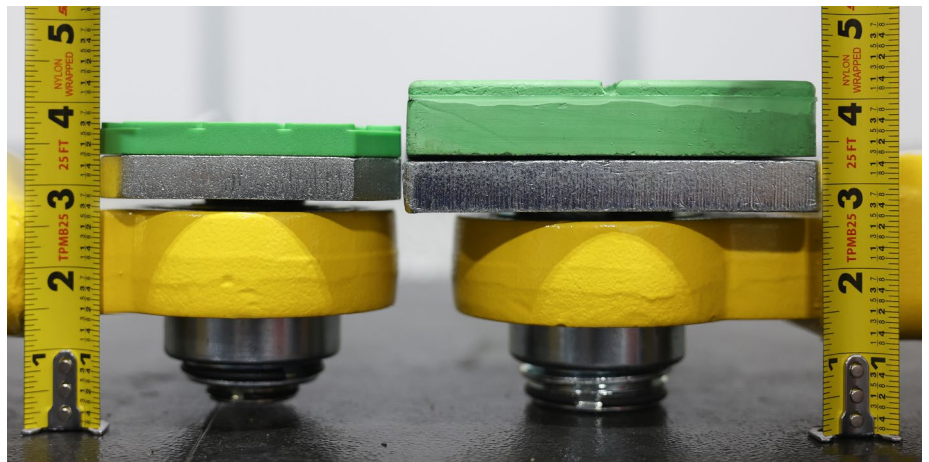

There has been a change/upgrade in the design of the footpad kit used for electric vehicle service. The current footpad kit (TFPK) will still be available. But the new P/N EVFPK, has been designed and implemented to aid technicians in quickly spotting and raising electric vehicles. The new EVFPK is ALI® certified with all of our 10K and 12K 2-Post and Inground lifts.

### **Reason for Change:**

The TFPK was, in some cases, too tall to fit under vehicles and too long to fit in a particular pick-up point location.

### **Benefits of the Change:**

- Lower than current TFPK
- Double screw-up for finer adjustments
- Fits in smaller spaces
- Pad is more durable and thinner
- Works well with luxury vehicles

### **Conclusion:**

Your cooperation in implementing this change is greatly appreciated. If you have any questions or concerns regarding this bulletin, please contact us. Thank you for your attention to this matter.
